

# !!! OLD VERSION OF THE API !!!

**This documentation concerns the old version of our API (called v2). This version of the API will be discontinued end of 2017. Please switch your webpages to the new version of the API, described under the following link: <https://apiv3.geoportail.lu/proj/1.0/build/apidoc/>**

## Welcome to the ACT's GeoAPI Documentation

The GeoAPI is a web delivered service platform delivering both data and functionality, enabling geographical information to be viewed on a map. Just as with the geoportail.lu web service, the GeoAPI enables the integration in external web pages of the geoportail functionality. Although the options for data processing are limited compared with “real” office GIS software, some targeted queries and analyses are possible. A web GIS makes access to geographical information truly independent of platform, installation and location. The services presented here are available via web map services (WMS) and application programming interfaces (APIs).

This section is geared towards developers interested in using the API on their webpages.

**Important Note:** For access to the GeoAPI on your own servers, you will need to [request access to the ACT](#), specifying the server address you wish to grant access too.

## Index of Content

- [Why use the GeoAPI](#)
- [Basic GeoAPI Step by Step Tutorial](#)
- [Extended GeoAPI Step by Step Tutorial](#)
- [Reference of the GeoAPI](#)
- [Frequently Asked Questions for the GeoAPI](#)
- [List of examples of GeoAPI](#)
- [Other Services offered](#)
- [Data Layers Functionality details](#)
- [Live GeoAPI Layers Listing](#)
- [Live GeoAPI Layers Listing - Theme Tourisme](#)
